

Cafection Enterprises Inc. - *Every cup counts.*

Cafection ecological footprint is made smaller with a sustainable refurbishing program that is environmentally conscious and that will service another 200 000 cups.

Every cup counts.

Cafection Single Cup Brewer is an ideal solution for the conscientious and environmentally responsible; its Single Cup Coffee Machines by-products are biodegradable. Coffee grounds are a brilliant addition to compost piles.

Cafection ecological footprint is made smaller with a sustainable refurbishing program that is environmentally conscious and that will service another 200 000 cups.

An Environmentally Friendly and sustainable brewer

- Both whole bean and ground solutions create less waste.
- Does not use plastic discs that clog our landfills.
- Coffee grounds can be used as compost.
- Filter paper is biodegradable.
- Designed to have a long life and to be refurbished (rather than replaced).
- Petroleum free.
- No excess packaging.

Making responsible choices

In simple terms, we strive to meet the growing environmental concerns. Being greener implies decreasing negative environmental impacts whenever we can. In addition to all the recycling projects for plastics, cans and paper, you can also compost coffee by-products with an environmentally friendly brewer. Complement your environment with a touch of color with new mugs or eco friendly paper cups in lieu of foam cups - these actions all add up in being proactive in contributing to a cleaner environment.

By selecting
the Avalon product line,
you are proactive
by making greener choices
that affect our planet.
