UNSWEETENED PEAR

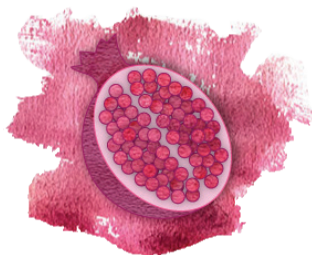

ORANGE MANGO

KIWI STRAWBERRY

LEMON LIME

POMEGRANATE

BLUEBERRY CUCUMBER

WATER WITH POP

Add a variety of both sweetened and unsweetened flavors to your water. Options range from lemon seltzer to organically sweetened blueberry-cucumber water.

ACTIVATED CARBON FILTRATION

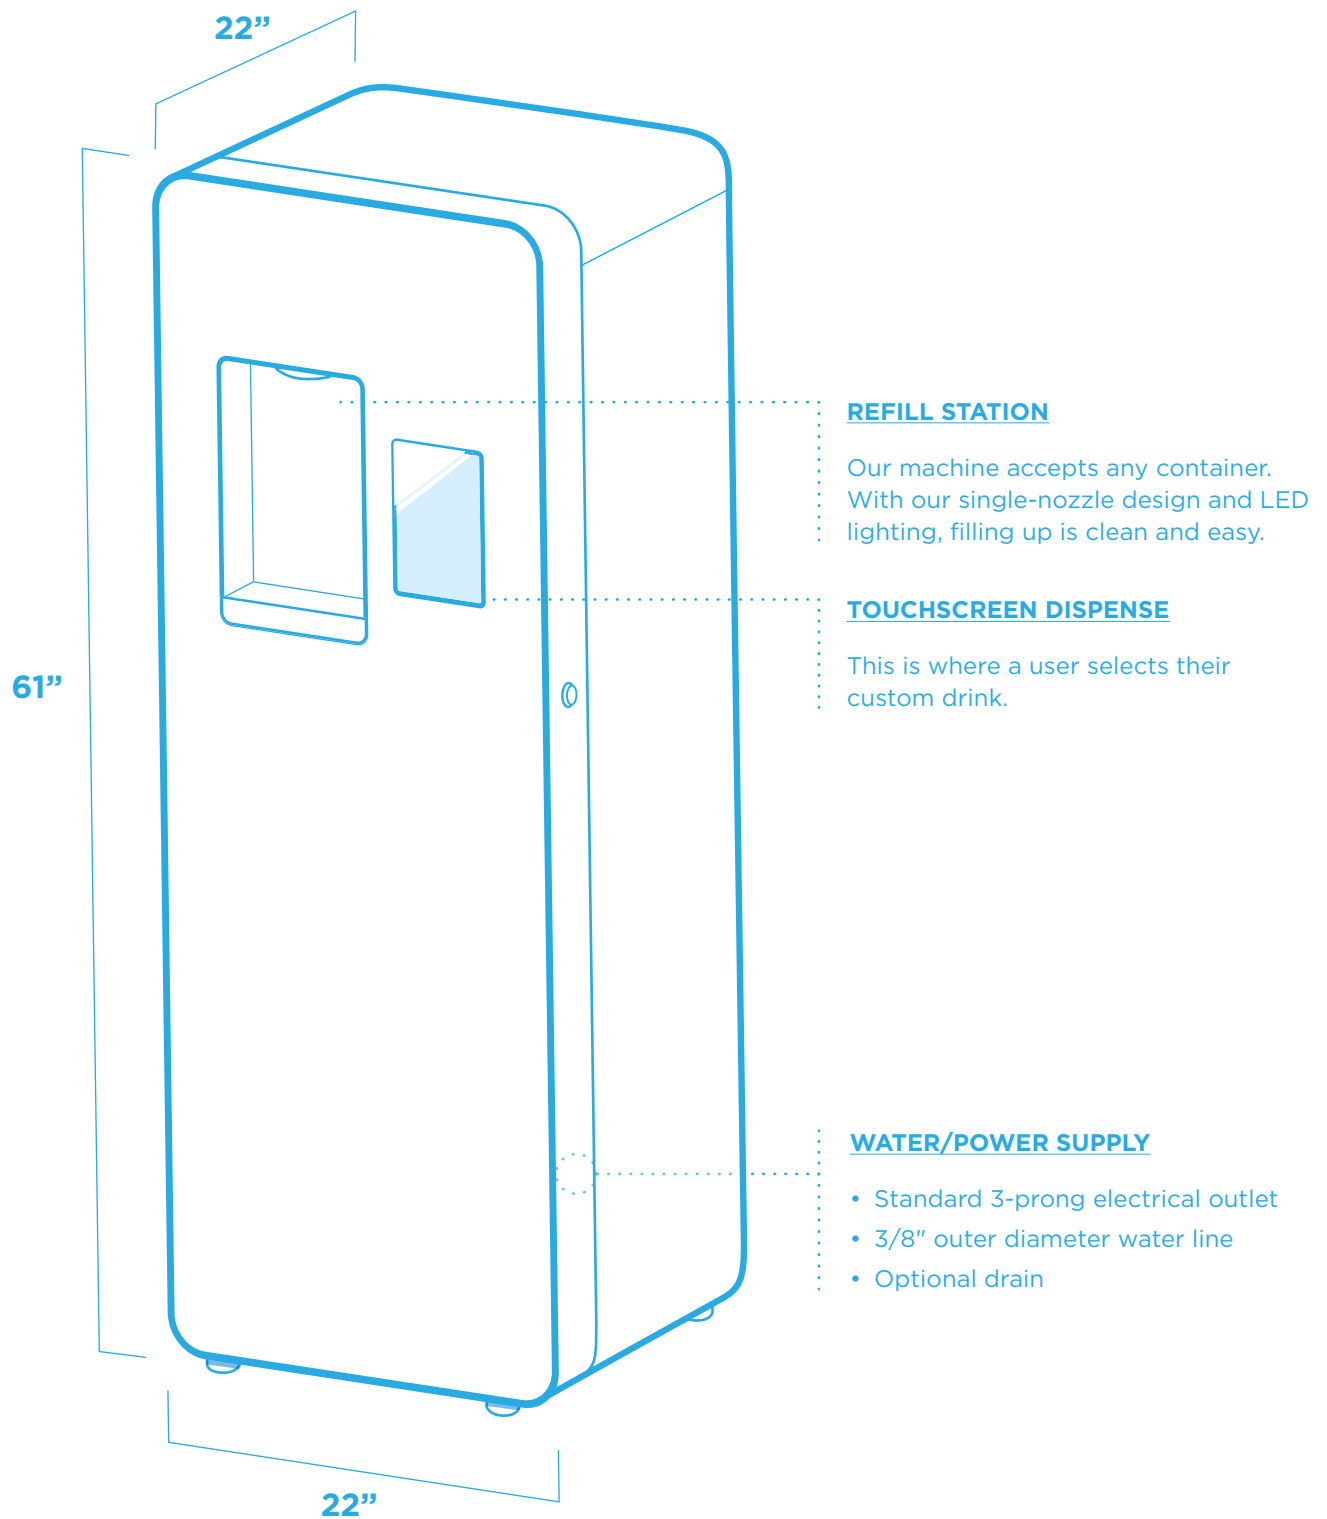

Improve water quality with our filtration system, which removes sediment, chemicals, pesticides, and the byproducts of chlorination.

AUTOMATED RESTOCKING

Never place an order for beverages (unless you want to switch up your flavors)! We track when beverages run out or when a filter needs changing, and replace inventory proactively. Our professional servicing team will handle the heavy lifting for you.

LOWER CARBON FOOTPRINT

Achieve sustainability goals by reducing plastic and energy waste. Our point-of-use system not only makes it easy to reuse bottles, but also entirely eliminates the fuel-intensive transportation of full beverage bottles.

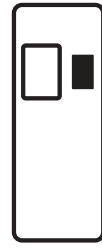

Lifecycle comparison of bottled beverages to Bevi

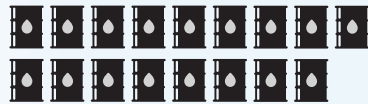

BOTTLE

BEVI

EXTRACTION

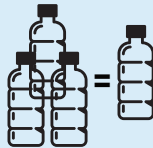

17 million barrels

of oil are used to make plastic bottles every year in the US.

The Bevi doesn't use plastic.
We are strictly a BYOB
(Bring Your Own Bottle) machine.

MANUFACTURING

3 bottles

worth of water are wasted in the manufacturing of one bottle of water.

No water is wasted in producing your Bevi drink.

TRANSPORTATION

33%

of the total carbon footprint of bottled beverage delivery comes from transportation.

80% less energy

is used in transportation to produce Bevi drinks. Water travels from your local municipal source, is filtered and then mixed directly into your container.

DISPOSAL

41 billion bottles

end up in a landfill each year in the US. That's enough to circle the earth 200 times.

35,000 bottles

on average are eliminated per Bevi machine per year.
